

26. A monitoring process comprising:
sensing at least one ambient condition in a selected region;
establishing the presence of a predetermined alarm state local to the
selected region;
monitoring at least one selected non-alarm parameter local to the selected
region;
sensing a user induced command signal;
responsive to the command signal, and in the absence of an alarm state,
verbally outputting at least one of information pertaining to the monitored parameter, or location
of the selected region.

27. A process as in claim 26 which includes sensing a second ambient
condition.

28. A process as in claim 27 which includes monitoring at least one of a
power source, a sensor of the ambient condition or a sensor of the second ambient condition.

REMARKS

Prior to examination, please enter the above claims.

Respectfully submitted,

WELSH & KATZ, LTD.
